

WISBROEK SOFTBILL HANDFEEDING

SUITABLE FOR:

Young softbills.

Wisbroek Softbill Handfeeding is a handfeeding specially developed for young of softbills. It is easily digestible and provides all nutritional needs of the young. It can also be used as force-feeding of sick or straggling young birds.

HOW DOES IT WORK?

Handfeeding may be necessary if, for example, the parent bird dies or the parents refuse to feed. If there are several young birds in one brood, it may happen that the youngest one is not being fed enough by the parents. It will then have to be fed by hand.

Wisbroek Softbill Handfeeding is a natural, high-energy rearing food. It is specially and scientifically developed to feed young softbills. The recipe of Wisbroek Softbill Handfeeding contains special building blocks such as certified blood plasma. This promotes the development of muscle tissue. Vitamin A and natural vitamins K1 and K2 support a healthy bone matrix and optimal bone structure. In addition, they promote the growth of the embryo. Finally, the probiotics in Wisbroek Softbill Handfeeding support the resistance of the birds. The feed is easily digestible. The fine structure makes it possible to feed it with a crop needle (0.8 mm).
